FETN FIREFIGHTER TRAINING

INCIDENT COMMAND SYSTEM, PART 3: OPERATIONS: CONTROLLING THE INCIDENT
038-0003

As an incident progresses, it becomes increasingly difficult to avoid "freelancing" and to stick to the pre-determined ICS. However, as the situation becomes more involved it becomes more important to follow the correct procedures to ensure safety. In this, the third episode of FETN's six-part series on ICS, we present some considerations for operations, staging, breaking up an incident, and much more.

HAZARDS OF FIGHTING TRASH CONTAINER FIRES, PART 2: INITIAL OPERATIONS AT TRASH CONTAINER FIRES
038-0032

In today's world, nobody in the fire service can afford to treat any call as "routine." When we get complacent, we get hurt. This is true no matter how small the incident and no matter what part of the country you work in. Take for example the trash container fire in Phoenix that grew out of control, eventually overtaking a grocery store and leading to the loss of firefighter Brett Tarver. It's hard to imagine that such a relatively small beginning could lead to such a tragedy. In this, the first episode of FETN's two-part series on trash container fires, we travel to Atlanta, Ga., in order to present all the considerations when dealing with trash container fires.

DIGNITY DESPITE DESPAIR, PART 1: MANAGING A LINE OF DUTY DEATH
038-0015

A line of duty death is one of the toughest situations to deal with. If you are not prepared with a pre-plan, it will be an even more difficult task to undergo. Join Dan McGuire, Senior Instructor for CISM Perspectives, as he shows how to provide an honorable remembrance of the fallen firefighter. In the first edition he outlines the "taboos" of LODD and shows you how to compose or update a written LODD pre-plan.

BROTHERS ... ON HOLY GROUND
038-2002

As a retired New York City firefighter, Mike Lennon took part in the rescue efforts on 9/11 and eventually filmed interviews at nearly every firehouse that lost men, creating the documentary film "Brothers ... on Holy Ground." It's a film that could only be made by one of their own, and FETN is proud to broadcast it this month in partnership with Engine House Productions. For purchasing information about this documentary, visit www.brothersonholyground.com.

REHABILITATION IN THE FIRE SERVICE
700-0583

One of the "forgotten" sectors in the incident management system is the rehabilitation sector. Often assigned as an afterthought and well into the incident, the rehab sector helps us preserve the health and welfare of our team. In this introduction to the series on Rehabilitation, we explore how to set up and manage the rehab sector, why a rehab sector is necessary, and why it should be established for small incidents as well as large. In addition, we present the medical aspects of rehab and discuss the physiological and psychological needs that rehab addresses.

SURVIVAL! TRAINING FOR THE BIG BOX MAYDAY, PART 1
735-0124

With recent incidents in Los Angeles, Kansas City and Phoenix, training for the Big Box "Mayday!" has become increasingly important. If you are called to a large structure, such as a grocery store or warehouse, and encounter some difficult circumstances, would you and the members of your department be prepared to handle it? In part one of this series, we join Survival! training chief Tim Sendelbach as he details the anatomy of today's "Big Box Buildings" and some of the most common concerns and potential hazards during "Mayday!" Operations. (Note: the courseware provided this month will cover all four parts of "Training for the Big Box Mayday.")

EENET

More programs from EENET are coming, but at the time of this printing, the remainder of the May schedule had not been released. Visit www.FETN.com for updated EENET information.

AMERICAN HEAT

AMERICAN HEAT

CRASH RESCUE MANAGEMENT
463-0503

In this edition of American Heat, we highlight two departments who discovered the realities of Crash Rescue Management (CRM). Exactly one month after September 11, 2001, New York City was hit with another aircraft tragedy. A passenger jet crashed into a Queens neighborhood, destroying homes and taking lives. This program presents firsthand accounts from FDNY firefighters about the operational and emotional challenges they faced throughout this incident. We also visit the Charlotte (NC) Fire Department and learn from their experience in responding to the plane crash incident at the Charlotte-Douglas Airport on January 7, 2003.

CLANDESTINE METH LABS
054-0076

What begins as a residential medical response call ends with a hazardous materials situation in a crime scene. Unlikely? Not as much as you may think, especially considering the rising number of clandestine methamphetamine labs cropping up across America. In this installment of *American Heat* we take a look at two departments that are all-too familiar with the meth problem: one, a mostly volunteer department in rural Missouri, and the other, a career department in urban Washington state. Both tell of their experiences and explain how they manage their resources and work together with law enforcement when handling meth labs. Also, you'll learn how to identify the components of a meth lab, the chemical processes used to "cook," their associated hazards, and the other hazards responders face. And finally, you'll accompany a clandestine lab team as they process an actual meth lab that was discovered after it ignited.

PULSE

PULSE™ EMERGENCY MEDICAL UPDATE

CARDIAC EMERGENCIES
464-0503

Chest pain is one of the most frequent patient complaints you'll hear. In this edition of *PULSE,* noted cardiology experts talk about how to respond to some of the most common conditions, as well as to some less common. We also explore why some doctors disagree about which treatments first responders should use on heart patients. In *PULSE Plus*, learn about Continuous Positive Airway Pressure. Galveston, Texas, EMS was the first to implement this technique. Studies show it reduces the need for intubation and increases survival rates. Galveston Paramedics demonstrate the technique and share some of their success stories.
CNE Credit: 2 Contact Hours – ANCC

PULSE: GERIATRICS
055-0133

As the baby boomers enter the next phase of their retirement, how prepared is your system for the increased number of geriatric patients? This installment of PULSE looks at cases of abuse and neglect, orthopedic injuries, and the medications commonly used by elderly patients. We travel to Tamarac, Florida, which has a geriatric population of more than 80 percent, to see how they respond to this large part of their population.

PULSE PLUS: DEMENTIA
055-0134

Elderly patients often suffer from a debilitating mental status, which puts them in danger of making otherwise irrational decisions. Sometimes this state of mind is more serious than simply "old age." As the medical community gains more insight into the dementia patient's world, first responders can use this information to better interact with this type of geriatric patient.

Prepare for Your Red Card Certification With One Complete, Convenient Package

Introducing the **Essentials of Wildland Firefighting** multi-media training program, your first step to achieving NWCG/ NIIMS Red-Card certification. Our 14-module package is fully compliant with the Instructional Outlines of NWCG S-130, S-190, I-100/ 200, PMS-492 and the standards of NFPA 1051.

The *ONLY complete training system* available to achieve Red-Card certification requirements.

Designed around the "Firefighter's Handbook on Wildland Firefighting, 2nd Edition," by Chief William C. Teie and produced by Access Training Systems Inc., the Essentials of Wildland Firefighting curriculum covers 14 specific training topics, including Fireline Hazards, Initial Attack Strategies and Tactics, and Wildland Urban Strategies.

The Essentials of Wildland Firefighting **complete training system** includes:

- "Firefighter's Handbook on Wildland Firefighting, 2nd Ed." and study guide by Chief William C. Teie
- "Human Factors" textbook, from NWCG
- 21 videotapes directed by Dean H. Thoemke, ATSI, Inc.
- 2 NWCG videos: "Human Factors" and "Using Your Fire Shelter"
- 1 CD-Rom containing PowerPoint presentations for each module, instructor guides, and individual module exams
- Teie's "Wildland Firefighting General Knowledge Flash Cards"

About Your New FETN Training Calendar

- Find training topics with ease with Dates and Times that are color-coordinated
- To accommodate every shift, each color block runs in a 3-day rotation
- Coordinate training events and add special notes to your calendar
- Videotape new programs on special "Data Frame Free Fridays"
- Brief descriptions and icons indicate services available with each training module
- Go to www.fetn.com for additional training information

Knowing what to watch and when has never been easier!

Brothers... On Holy Ground

A FILM BY MIKE LENNON, FDNY
NARRATED BY PETE HAMILL

See it in May on FETN

AN ENGINE HOUSE PRODUCTION

KEY TO SYMBOLS

Use the key below for specific information pertaining to this month's programming.

NEW — Indicates that the program premieres this month.

A+ — Indicates that the program is tested, and a printed copy of the courseware is included in this month' shipment (ask your department's Training Officer for a copy). Courseware and testing for these programs is also available on PRIMEnet. To get the most out of FETN training, use the courseware and programming in a supervisor-led classroom setting.

Indicates that the accompanying courseware is available online through PRIMEnet, FETN's fully integrated e-learning solution. For more information, call (866) 725-7975 or visit www.pwpl.com/primenet.

Indicates that the program is available as a Training On Demand product.

For information about FETN, your subscription, or programming, call 800-932-3386 or visit www.FETN.com.
